PROPERTIES OF NITROGEN

- Nitrogen is an inert gas that is abundant in nature. The air we breathe consists of 78% nitrogen.
- Two of the great properties of nitrogen are that it is inert and typically dry.
- What makes nitrogen practically inert is the triple atomic bond of the N₂ diatom, which is one of the strongest atomic bonds observed in nature. Significant energies are needed in order to break this bond.
- Nitrogen is extremely dry with a gaseous dew point of -70°F (-57 °C).

USES OF NITROGEN

Because of its inert nature as well as extremely dry characteristics, nitrogen is used extensively in various industrial, oil & gas, aerospace and military applications.

SOME OF THE MOST COMMON USES OF NITROGEN:

- Drying of vessels and pipes.
- Fire and explosion prevention: When oxygen-rich air is replaced with nitrogen in vessels and critical spaces, ignition is suppressed. This prevents the possibility of fires and explosions.
- Corrosion protection: Since nitrogen is non-reactive, oxidation and other forms of corrosion can be minimized. Prevention of chemical reactions: Because nitrogen is non-reactive, undesired chemical reactions in critical processes can be prevented.

GENERATING NITROGEN: PSA & MEMBRANE METHODS

Most of the nitrogen used in industrial applications is generated by separating the nitrogen from the oxygen present in ambient air. The two most common separation technologies for nitrogen are membrane and pressure swing adsorption (PSA). The benefit of these technologies is that nitrogen can be produced anywhere at any time.

PSA METHOD OF NITROGEN GENERATION

Pressure swing adsorption (PSA) is a technology used to separate some gas species from a mixture of gases under pressure according to the species’ molecular characteristics and affinity for an adsorbent material. It operates at near-ambient temperatures and differs significantly from cryogenic distillation techniques of gas separation. Specific adsorbent materials are used as a trap, preferentially adsorbing the target gas species at high pressure. The process then swings to low pressure to desorb the adsorbed material.

MEMBRANE METHOD OF NITROGEN GENERATION

Incoming air is separated inside the membrane using tens of thousands of hollow fibers, each of which is sized to capture N₂ molecules. The remaining components (mostly water vapor and oxygen) that make up ambient air are vented away from the membrane inlet before the nitrogen is delivered to the membrane outlet. Membranes have a size advantage over PSA nitrogen generation systems. They are therefore highly suitable for fully integrated nitrogen generation systems such as the NGM® and mobile systems.

TYPES OF NITROGEN AND LOGISTICS

The two common forms of industrial nitrogen are nitrogen gas and liquid nitrogen. Liquid nitrogen can be vaporized to convert it into gaseous state. For industrial applications there are three ways in which nitrogen gas is supplied:

LIQUID NITROGEN

Nitrogen in liquid form purchased from a merchant gas supplier. The advantage of nitrogen in liquid form is that large volumes of nitrogen can be shipped and stored onsite. The disadvantage is that the end-user is dependent on a vulnerable supply chain. Furthermore, liquid nitrogen is stored in cryogenic vessels which are expensive, bulky and subject to leaks, thus creating waste. Cryogenic nitrogen suppliers typically require a long term contract at a locked-in rate which means that it is more expensive than other forms of nitrogen.

COMPRESSED NITROGEN

Nitrogen can be purchased in compressed gas form. This requires the use of heavy, high-pressure cylinders which can be hazardous. The use of high-pressure nitrogen cylinders is limited to small applications because of the limited storage capacity of the bottles. Furthermore, not the entire volume of the bottles can be used thus the end-user pays for gas which is not being used. Users of nitrogen cylinders are subject to the same supply chain interruption risks as users of cryogenic nitrogen.

LOCALLY ON-DEMAND GENERATED NITROGEN:

Generating nitrogen onsite. This is the preferred method for end-users who are in remote locations or who cannot afford any interruption in their nitrogen supply. Generating nitrogen onsite, on-demand is simple and is explained in the following sections.
OVERVIEW OF BAUER NITROGEN SYSTEMS

35 Years Of Nitrogen Generation Experience

WHY BUY NITROGEN WHEN YOU CAN MAKE YOUR OWN?
The BAUER Nitrogen Generators are self-contained, fully integrated, modular systems that eliminate the hazards involved with the handling of high-pressure cylinders, as well as the burden of the merchant, supplied nitrogen gas. BAUER nitrogen generator systems are designed for the on-demand supply of nitrogen gas at purities up to 99.5%.

Generating nitrogen to meet customer required purity and quality is a critical process. Nitrogen generation membranes require exact control of feed-air-flow, pressure, temperature, and quality (oil content, moisture content and particulate content), which BAUER provides in its turnkey systems.

All BAUER nitrogen systems are engineered to provide years of reliable performance. Critical performance values such as pressure, temperature and O2 content are electronically monitored after each critical process step in order to assure optimal long–term total system performance. BAUER NGM® and SNG® nitrogen systems adapt automatically to changing environmental conditions as well as changes in membranes as they age.

BAUER GUARANTEES SYSTEM PERFORMANCE OVER TIME
› Process performance monitoring after each critical step to assure nitrogen quality and purity
› Adaptive system that automatically adjusts to various ambient conditions as well as membrane aging
› Remote telemetry to provide real-time feedback of system performance

BAUER MEMBRANE BASED NITROGEN SYSTEMS FOR A WIDE VARIETY OF APPLICATIONS

BAUER produces a complete product line of membrane-based nitrogen systems suitable for a wide variety of applications including:
› Industry (Plastic Injection Molding, Inerting)
› Oil & Gas (Upstream, Midstream, Downstream, Offshore)
› Energy and Alternative Energy (Transformer, Wind, Hydro)
› Aerospace
› Military

For these applications, BAUER provides a variety of specific nitrogen systems including:
› Low-Pressure Stationary Electric Drive Systems
› High-Pressure Stationary Electric Drive Systems
› Diesel Driven High and Low-Pressure Portable Systems
› System Size Ranges from 7.5 HP to 700 HP

NITROSOLUTIONS | OVERVIEW OF BAUER NITROGEN SYSTEMS | 7
**BAUER NGM® Membrane Based Low Pressure Nitrogen Systems**

The BAUER NGM® system is an integrated stationary rugged membrane-based nitrogen generation system. Flow Range: (10 SCFM/16 m³/hr) to (750 SCFM / 1295 m³/hr). Nitrogen Purity Range: 96% to 99.5%. Final Pressure: Up to 150 PSIG (10 bar).

All NGM® Nitrogen generation systems are fully integrated and designed to be “plug-and-play”. They incorporate a BAUER Rotorcomp™ feed air compressor, PLC control system with integrated BAUER CONNECT® IoT remote telemetry, inlet air filtration and reheating system, nitrogen separation membranes and a nitrogen buffer receiver.

This system has guaranteed performance in ambient conditions. By utilizing a variable speed motor drive to precisely control inlet airflow and pressure to the nitrogen separation membranes in various ambient conditions, BAUER NGM® systems are designed to always maintain consistent performance as related to output nitrogen flow and nitrogen purity.

**STANDARD SCOPE OF SUPPLY**

- Self-contained, fully-integrated turnkey nitrogen generation system for discharge pressures up to 150 PSIG
- Engineered to operate reliably in harsh industrial settings
- Feed air compressor; single-stage air-cooled, oil-injected, continuous-duty rotary screw compressor
- Port for condensate drain to customer collection device or drain system
- 3-stage membrane pre-filtration system
- High durability membrane air separators
- TEFC electric motors for each compressor with v-belt drive, guard and tensioning device
- Variable frequency speed control
- UL® labeled Control Panel with PLC controller. Includes touchscreen interface (for operation, maintenance, and troubleshooting)
- In-line oxygen analyzer to determine nitrogen purity
- Pressure sensors for monitoring oil and final product pressure
- 24-month warranty, lifetime support guarantee

**BAUER NGM® SYSTEM FEATURES**

- Wide ambient operating temperature range 40° to 113°F (4.4° to 45°C)
- Electrically powered and available in the following power configurations:
  - 460 v, 3ph, 60 hz (standard)
  - 380/400 v, 3 ph 50 hz or 60 hz (optional)
  - 580 v, 3 ph, 60 hz (optional)
- Other voltages available upon request

**OPTIONAL FEATURES:**

- Weatherproof enclosure
- Class 1, Div2 execution for hazardous locations
- Sound attenuation (less than 85dBA)
- BAUER Connect® IoT Remote Telemetry
- Special Marine/Offshore Paint

**KEY FEATURES AND BENEFITS**

- **Uninterrupted N₂ Supply:** Point-of-use nitrogen generation provides an alternative to external sources of nitrogen by eliminating potential supply chain interruptions and the logistical hassles associated with merchant gas
- **Cost Savings:** Point-of-use nitrogen systems are a cost-effective alternative to merchant gas that require long-term contracts and are associated with long-term locked-in rates
- **Personnel Safety:** Point-of-use nitrogen is a safer alternative by eliminating the need for shuttling heavy merchant gas bottles back and forth between supplier and point of use
- **Robust Design:** All BAUER on-demand nitrogen systems are designed to operate continuously in all manner of severe ambient conditions indoors or outdoors
- **Superior Reliability:** All BAUER systems are designed and manufactured to provide BAUER’s legendary reliability and performance with the lowest overall lifecycle cost. In addition, every system is backed by BAUER’s two (2) year all-inclusive warranty and lifetime support

---

**BAUER NGM® FLOW/PURITY PERFORMANCE PER MODEL**

Performance based on Outlet Pressure of 150 PSIG (10 BAR), Ambient Temperature of 110°F (43°C), Elevation: Sea Level, and RH of 65%. Lower discharge pressures are possible with optional integrated pressure regulation. Motor power range of 10 HP (7.5 KW) to 750 HP (560 KW).
**BAUER NGM® 3 & 6**  
**Designed for Low Nitrogen Flow Requirements**  
» Nitrogen Purity Range: 96% to 99.5%  
» Final Pressure: Up to 150 PSIG

**BAUER NGM® 9**  
**Designed for Low To Medium Nitrogen Flow Requirements**  
» Nitrogen Purity Range: 96% to 99.5%  
» Final Pressure: Up to 150 PSIG

BAUER SNG®
Membrane Based High Pressure Nitrogen Systems

The BAUER SNG® product line is an extension of the BAUER NGM® membrane-based nitrogen generation system but for applications where higher pressures up to 5000 PSIG (350 bar) required. Flow Range: (10 SCFM / 16 m3/hr) to (750 SCFM / 1295 m3/hr). Nitrogen Purity Range: 96% to 99.5%. Final Pressure: Up to 5000 PSIG (350 bar).

All BAUER SNG® nitrogen generator systems are fully integrated and designed to be “plug-and-play”. They incorporate a BAUER NGM® membrane generation system with a matching BAUER high-pressure reciprocating booster compressor. Guaranteed Performance In All Ambient Conditions—by utilizing a variable speed motor drive to precisely control air flow and pressure to the nitrogen separation membranes in various ambient conditions, BAUER SNG® systems are designed to always maintain consistent performance as related to nitrogen flow and nitrogen purity.

STANDARD SCOPE OF SUPPLY

- Self-contained, fully-integrated turnkey nitrogen generation system with integrated high-pressure booster for discharge pressures up to 6,000 PSIG
- Engineered to operate reliably in harsh industrial setting
- Feed air compressor: single-stage air-cooled, oil-injected, continuous-duty rotary screw compressor
- High pressure multi-stage reciprocating booster compressor, pressure-lubricated, continuous-duty rated
- 3-stage membrane pre-filtration system
- High durability membrane air separators
- TEFC electric motors for each compressor with v-belt drive, guard, and belt tensioning device
- Port for condensate drain to customer collection device or drain system
- UL® labeled Control Panel with PLC controller. Includes touchscreen interface (for operation, maintenance and troubleshooting)
- In-line oxygen analyzer to determine nitrogen purity
- Pressure sensors for oil and final product pressure
- 24-month warranty, lifetime support guarantee

BAUER SNG® SYSTEM FEATURES

- Wide ambient operating temperature range 40°F to 113°F (4.4° to 49°C)
- Electrically powered and available in the following power configurations:
  - 460 v, 3ph, 60 hz (standard)
  - 380/400 v, 3 ph 50 hz or 60 hz (optional)
  - 580 v, 3 ph, 60 hz (optional)

OPTIONAL FEATURES:

- Weatherproof enclosure
- Class I, Div2 execution for hazardous locations
- Sound attenuation (less than 85dBA)
- BAUER CONNECT® IoT Remote Telemetry
- Special Offshore Paint

HIGH PRESSURE NITROGEN FROM THE HIGH PRESSURE EXPERTS

BAUER is recognized worldwide as the leader in high-pressure compressors. BAUER Compressors’ durability, reliability, and wide range are unmatched in the industry. The entire range of the BAUER NGM® nitrogen generation systems can, therefore, be covered by integrating BAUER high-pressure booster compressor when nitrogen has to be delivered at pressures up 6000 PSIG. The table below illustrates the performance of the BAUER High-Pressure Booster range from 7.5 HP (5.5 kW) to 450 HP (315 kW).

KEY FEATURES AND BENEFITS

- Uninterrupted N₂ Supply: Point-of-use nitrogen generation provides an alternative to external sources of nitrogen by eliminating potential supply chain interruptions and the logistical hassles associated with merchant gas
- Cost Savings: Point-of-use nitrogen systems are a cost-effective alternative to merchant gas which require long-term contracts and are associated with long-term locked-in rates
- Personnel Safety: Point-of-use nitrogen is a safer alternative by eliminating the need for shuttling heavy merchant gas cylinders back and forth between supplier and point of use
- Robust Design: All BAUER on-demand nitrogen systems are designed to operate continuously in all manner of severe ambient conditions indoors or outdoors
- Superior Reliability: All BAUER systems are designed and manufactured to provide BAUER’s legendary reliability and performance with lowest overall lifecycle cost. In addition, every system is backed by BAUER’s two (2) year all-inclusive warranty and lifetime support

**NITROMAX™ Large Mobile Engine Drive High Pressure Nitrogen Systems For Offshore & Onshore Oil & Gas Applications**

**APPLICATIONS**
- High purity nitrogen for coil tubing, gas lifting, well stimulation, pipeline pigging and inerting.

**DESIGNED FOR OFFSHORE**
- Packaged in a heavy duty DNV certified container or crash frame weighing less than 14 tons for FPSO deployment.

**SUITABLE FOR ONSHORE**
- Can be placed on standard and transported by truck to job sites.

Mobile on-site Nitrogen Generation System
90-5000 PSIG (6-350 BAR)

SYSTEM FOOTPRINT
DIMENSIONS L X W X H inches (mm)
› 199” L x 90” W x 84” H
WEIGHT pounds (kg)
› 11,000 lbs

STANDARD SCOPE OF SUPPLY
› Self-contained, fully-integrated turnkey mobile nitrogen generation system with high-pressure booster for discharge pressures up to 5,000 PSIG
› Feed air compressor: BAUER Rotocomp®, EVO 3 single-stage air-cooled, oil-injected, continuous-duty rotary screw compressor
› 3-stage membrane pre-filtration system
› High durability membrane air separators
› High-Pressure Booster: BAUER BK12.2 series air-cooled, oil-lubricated high-pressure reciprocating compressor
› Automatic condensate drain port for connection to the customer collection system
› UL® Labeled Control Panel with PLC controller. Includes touchscreen interface (for operation, maintenance and troubleshooting)

1) Capacity (FGD) is referenced to standard conditions. Tolerance +/- 5%. 2) Purity reflects content of O₂-free gas produced.

Volume flow rate is according to ISO 1217 with the following standard conditions: Inlet air pressure = sea level, 14.5 psia (1 bar a)
Inlet air temperature = 68 °F (20 °C)
Relative Water Vapor Pressure = 0
Contact BAUER for site conditions that are other than standard. Correction factors may apply that may derate performance.

SPECIALTY NITROGEN SYSTEMS

N2IT® XL
Comprehensive Gas Assist Molding System
G.I.T.
Gas Injection Technology
› Reduce cycle times
› Reduce resin cost
› Improve part quality
› Simplify mold design

CONTROL SYSTEM
State-of-the-art control system with TRUE TRACK RAMPING® and intuitive interface allows for simple operation
› Real-time accurate diagnostics
› Remote interface via smartphone option
› On-screen manual and maintenance instructions

SYSTEM FOOTPRINT
DIMENSIONS L X W X H inches (mm)
› 69.375” x 37” x 82” (1762.125mm x 939.8mm x 2082.8mm)
WEIGHT pounds (kg)
› 1,700 lb. (771.107 kg)

BENEFITS
› The N2IT® XL incorporates an integrated nitrogen generator, booster compressor, high-pressure storage, and 2-channel process control unit in one portable package
› Only compressed air and electrical power are required for the N2IT® XL to apply GIT (Gas Injection Technology) to any injection molding process, eliminating the need to purchase nitrogen
› The N2IT® XL is loaded with user-friendly features and maintains accurate and repeatable processing with the TRUE TRACK RAMPING® precision pressure control
› The N2IT® XL includes EUROMAP 62 interface, and can easily be connected with any injection molding machine in your facility

BAUER SNG® 4S
Stationary Nitrogen Generation System

FEATURES
- All aluminum frame and enclosure
- 316 stainless steel tubing and fittings
- Stainless steel hardware
- Lifting rings and forklift slots for mobility
- Inlet air filtration
- Electric membrane pre-heater

FEED AIR REQUIREMENTS
- Minimum -40°F (-40°C) Dewpoint
- Less than 10 Microns
- Zero Hydrocarbons (PPM)

SYSTEM FOOTPRINT
DIMENSIONS L X W X H inches (mm)
- 62" x 40" x 44" (1574.8 x 1016 x 1117.6)
WEIGHT pounds (kg)
- 950 (431)

BENEFITS
- Enhanced Safety: On-site generation of nitrogen eliminates the danger in transporting bulk or cryogenic tanks
- Guaranteed Performance: Engineered for reliable operations in all offshore environments
- Innovative Design: Compact footprint provides superior flexibility by minimizing deck space requirements
- Exceptional Reliability and Best-in-class: Quality creates the lowest cost of ownership

NITROGEN STORAGE SYSTEMS

STORAGE
For standard storage assemblies, BAUER utilizes a universal welded steel rack (RCK-0037) of our design that safely and securely accommodates two storage cylinders whether of the ASME or the UN variety. For storage system requirements of greater capacity, multiple rack assemblies can be bolted and tubed together. These storage rack assemblies are available in either vertical or horizontal configurations. All storage rack assemblies up to 2 modules deep and 2 modules wide can be shipped completely interpipedin, bolted together, and placed horizontally on a single shipping pallet. For larger orders, a tubing and hardware kit for connecting the modules will be shipped loose for on-site assembly. In addition to the standard storage rack assemblies as described above, we are capable of providing engineered solutions to accommodate customer specified storage and racking requirements.

- Storage assemblies can be configured in bulk or bank systems depending on the gas distribution system required
- BAUER can provide custom regulation/distribution panels for remote installation

Optional nitrogen storage assembly configured for up to twelve (12) high pressure UN/ISO or ASME storage vessels with integrated high-flow pressure regulator.

BAUER CONNECT® REMOTE TELEMETRY AND CONTROL VIA MOBILE APP

BAUER CONNECT® is an App-based IoT solution that allows BAUER customers to remotely monitor the performance as well as control the entire BAUER system through any wireless mobile device or computer anywhere, anytime. The key features of this IoT solution, allow customers to increase efficiency and productivity, save time, do more with fewer resources, have lower operational costs and have total flexibility with a solution tailored specifically for them. BAUER CONNECT® – Connection that matters.

BAUER REMOTE HMI

The BAUER Remote HMI function allows factory-trained technical personnel to remotely control the BAUER system via the BAUER CONNECT® App with the same functionality as if one were standing in front of the actual unit.

- Live connection and control of all units no matter the location(s)
- Save time and money with remote monitoring
- Secure log-ins - Only approved team members can access and control your compressor system

BAUER REPORTS

The BAUER Reports feature is a function that generates custom reports tailored to the specific needs of the customer. Customers can have access to historical data via a multitude of standard and customized reports.

BAUER PREDICTIVE ANALYTICS

This feature of BAUER CONNECT® provides a new pro-active dimension to perpetually maintaining customers’ compressor systems at peak conditions with minimum downtime. BAUER’s predictive analytics algorithm uses artificial intelligence to analyze the collected system information on the BAUER Cloud™ to predict upcoming maintenance requirements and preventative actions to avoid unplanned shutdowns.

MOBILE DASHBOARDS

BAUER CONNECT® App will also display a real-time graphical display of the entire system (SCADA view). The Mobile Dashboard feature provides information such as compressor system status, error log, critical pressures and temperatures, and volume of air dispensed in storage information, etc.

- Quick reference of all of your units at your fingertips
- Does not require password validation every time app is used
- Beneficial tool, that allows for monitoring without the ability to control the unit(s)
- Dashboards can be customized to specific customer needs

NOTIFICATIONS

The BAUER CONNECT® Mobile App will send push notifications if certain critical parameters of the BAUER system fall outside of normal operating range or if triggered by a system alert. This assures that essential personnel is notified immediately, thus allowing for pro-active intervention in a situation that could potentially be detrimental to the BAUER system as well as the customer’s operation.

QUALITY AND RELIABILITY

Our factory-original replacement parts assures you that when maintenance or repair is performed, you are restoring the unit to its original specifications and performance.

COMPATIBILITY

We configure our designs with interchangeability and our end user in mind. You can count on parts being available for all BAUER models. PartsSales@BauerComp.com or 1-(844)-500-5822

TRAINING

BAUER Compressors Inc. offers a variety of on site & off site Training Schools. Our on site classes are held at our BAUER Training Facility and are taught by the same people that help manufacture, test and service our products. From electrical systems to hands-on breakdowns, we cover all areas of compressor operation.

TRAINING TOPICS

Basic mechanical theory, control system theory (electric and pneumatic) along with troubleshooting for all BAUER systems.

Class schedule and course registration at: www.BauerCustomerTraining.com

GLOBAL SERVICE

SERVICE AND SUPPORT

Our compressors are designed with you in mind. Easy to use manuals guide you through clear, mechanically accessible repairs. Our worldwide distribution network was developed to assist in after-sales support, along with product and maintenance parts assistance.

MECHANICAL & ELECTRICAL

Total customer satisfaction is our top priority. BAUER provides 24-7 phone tech and troubleshooting support at our BAUER Helpdesk. Our support continues throughout our warranty period and beyond.

For BAUER Helpdesk please email: CustomerService@BauerComp.com or call at: 1-(844)-500-5822
