HISTORY
TRUSTED INDUSTRY LEADER FOR OVER 70 YEARS

For the past 70 years, BAUER Compressors has stood the test of time for the highest level of performance, quality, safety, and innovation. All BAUER compressors are designed and manufactured in-house with complete control of every step to ensure that BAUER’S uncompromising standards for ultimate performance, unmatched reliability, highest durability, and lowest cost of ownership are met. At BAUER, we are well known for our high-tech precision manufacturing and quality process, resulting in products that outperform and outlast any other compressor brand on the market today.

INNOVATION
ULTIMATE PERFORMANCE AND RELIABILITY

At BAUER, we are committed to providing our customers with the most technologically advanced products in the world. Only the latest CAD and finite element calculation programs are used in the design of each product. To maintain our technological edge, BAUER reinvests a large portion of corporate earnings back into R&D. Simultaneously, we draw on our more-than-a century of machine building heritage to advance our causes for the future. The result: products which are built to attain the highest standards of performance and reliability.

QUALITY
LOWEST COST OF OWNERSHIP

At BAUER, our world-renowned quality is a result of being vertically integrated. We maintain control of the entire production process, starting from R&D, to engineering & design, and to manufacturing & assembly. Only the highest -grade materials and state of the art precision manufacturing methods are used in the making of each compressor. To ensure consistent quality throughout, our entire manufacturing process, from the compressor to complete system, is ISO9001 certified. Every unit is put through rigorous testing by our QC department before release from our factory for shipping. The result: a highly-reliable product that keeps on performing with minimal cost of ownership.

MISSION STATEMENT

Our mission at BAUER COMPRESSORS INC. is to provide the highest quality products and solutions for high pressure air and gas. We are committed to using the latest technology, best materials, most qualified human resources, and the most efficient fabrication techniques. As a result, our equipment solutions offer superior performance along with best value, and are delivered on time, defect-free and are supported to achieve their maximum potential throughout their entire lifecycle.
BAUER ARGON SOLUTIONS

HIGH-PRESSURE SOLUTIONS
Argon is monoatomic and has a loosely-spaced chemical structure. Not only is it denser than air and capable of displacing it, but it also withstands compression better than air, a quality that makes it worthwhile in many applications. This also means that argon compressors must be durable and handle high pressures.

ARGON RECOVERY
At just under 1%, argon is the third most abundant gas in the atmosphere behind nitrogen and oxygen. Despite this abundance, it still sells for a premium because of how useful it is. BAUER manufactures argon compressors that can be utilized in recovery systems that recapture and purify used argon gas so that it can be reused, reducing costs, and reducing the carbon footprint of transporting additional resources.

BEST WARRANTY IN THE INDUSTRY
We are so confident in our quality that our argon systems are warranted for two years after the shipment date. This level of support is virtually unmatched in the industry.

24/7 CUSTOMER SUPPORT
All BAUER argon systems are supported by a nationwide network of BAUER factory-trained technicians. We are available 24/7 for technical and spare parts support. We also offer remote monitoring of your system for early problem detection, to ensure the highest level of uptime and reliability for years to come.

BAUER’s argon line builds on 7-decades as the industry leader for quality compressor systems. We design and build all of our compressor lines to the highest reliability and durability standards in a vertically-integrated manufacturing process to provide our customers with the lowest lifetime cost of ownership.
**THE BRAIN** after experiencing oxygen deprivation.

Argon has cardioprotective and neuroprotective qualities. It can help treat arrhythmias and even protect the brain by forming carbon monoxide. In contrast, argon lasers are extremely precise. They can remove tumors and other abnormal growths, provide retinal phototherapy, and even repair damaged arteries. They can also be used to treat retinal detachment and retinal phototherapy for those who are diabetic.

**LIGHTING:**

Argon is used to fill fluorescent and incandescent bulbs to protect the filament, prolonging bulb life. Additionally, the inclusion of argon allows light to be generated at much lower voltages.

The noble gases are used to produce varying colors in decorative lighting. While they are all colloquially referred to as "neon lights," neon produces a blue or violet light. Helium glows yellow or orange, and argon glows with a red-orange color.

**OTHER USES:**

Fully transparent, moisture resistant, and with low thermal conductivity, argon increases the efficiency of double-paned windows. This is very common in Europe, where central air conditioning is less common than in the United States. Windows filled with argon will have two holes along the spacer material. One hole is for pumping argon in, while the other is to allow the displaced air to exit.

Argon can be used as an insulator in scuba drysuits, protecting the wearer from body heat loss. Since argon withstands compression better than atmospheric air, a drysuit utilizing argon can be used at greater depths.

Inert gas chambers are spaces where atmospheric air is replaced with an inert gas to provide a protective environment. 3D printers often employ inert gas build chambers and lasers that sinter polymer powder, fine metal dust, or other materials to create inexpensive components. 3D printing, a form of additive manufacturing, consumes fewer resources than traditional manufacturing methods. Once again, argon is the gas of choice when working with metals. It protects the metal powder from moisture and oxygen, whereas other gases could cause the formation of nitrides or other impurities.

Argon lasers are extremely precise. They can remove tumors and other abnormal growths, provide retinal phototherapy, and even repair damaged arteries. They can also be used to treat retinal detachment and retinal phototherapy for those who are diabetic.

**LIGHTING:**

Argon is used to fill fluorescent and incandescent bulbs to protect the filament, prolonging bulb life. Additionally, the inclusion of argon allows light to be generated at much lower voltages.

The noble gases are used to produce varying colors in decorative lighting. While they are all colloquially referred to as "neon lights," neon produces a blue or violet light. Helium glows yellow or orange, and argon glows with a red-orange color. 

**INDUSTRIAL MANUFACTURING:**

Argon is perhaps best known for its use as a shielding gas in MIG (metal inert gas) and TIG (tungsten inert gas) welding. Argon prevents contamination of the welding surfaces by displacing air and moisture. It also plays a role in stabilizing and shaping the penetration profile of the arc, which helps to ensure the integrity of the weld, and encourages first-time quality.

Stainless steel requires a carbon content of 1.2% or less. To achieve this, manufacturers employ a process called argon-oxygen decarburization. A mixture of argon and oxygen is injected into liquid steel, and the oxygen removes the carbon by forming carbon monoxide. In contrast, argon gas protects steel from the corrosive effects of oxygen and regulates chromium loss. Chromium makes stainless steel more rigid and more resistant to corrosion.

Inert gas chambers are spaces where atmospheric air is replaced with an inert gas to provide a protective environment. 3D printers often employ inert gas build chambers and lasers that sinter polymer powder, fine metal dust, or other materials to create inexpensive components. 3D printing, a form of additive manufacturing, consumes fewer resources than traditional manufacturing methods. Once again, argon is the gas of choice when working with metals. It protects the metal powder from moisture and oxygen, whereas other gases could cause the formation of nitrides or other impurities.

Argon can be a blanket gas for growing silicon and germanium crystals. Silicon crystals are commonly found in solar panels and electronics, and germanium crystals are used in fiber optics and light-emitting diodes (LEDs).

**HEALTHCARE USES:**

When administered in ventilation, argon has cardioprotective and neuroprotective qualities. It can help treat arrhythmias and even protect the brain by forming carbon monoxide.
### BAUER A-SERIES 2

**Air-Cooled Compact Design for Low to Medium Flow Applications**

**SYSTEM FOOTPRINT**

**Dimensions L x W x H inches (mm) approx.**

- GAR25.9: 97" x 58" x 85" (2464 mm x 1473 mm x 2159 mm)
- WEIGHT pounds (kg) approx.
  - Up to 3190 PSIG Operating Pressure: 3200-4000 lbs (1451-1814 kg)
  - Up to 4900 PSIG Operating Pressure: 1200 lbs (544 kg)

**Open Design**

¹ Lower inlet pressure can result in lower operating pressure. Contact BAUER for min./max. operating pressure relative to inlet pressure.
The BAUER Reports feature is a function that generates custom reports tailored to the specific needs of the customer. Customers can have access to historical data via a multitude of standard and customized reports.

BAUER PREDICTIVE ANALYTICS

This feature of BAUER CONNECT® provides a new pro-active dimension to perpetually maintaining customers' compressor systems at peak conditions with minimum downtime. BAUER's predictive analytics algorithm uses artificial intelligence to analyze the collected system information on the BAUER Cloud to predict upcoming maintenance requirements and preventative actions to avoid unplanned shutdowns.

BAUER REMOTE HMI

The BAUER Remote HMI function allows factory-trained technical personnel to remotely control the BAUER system via the BAUER CONNECT® App with the same functionality as if one were standing in front of the actual unit.

BAUER CONNECT® FLOW CHART

BAUER Unit — Internet — BAUER Cloud — Mobile Device

BAUER CONNECT® - Connection that matters.

IOT REMOTE TELEMETRY AND CONTROL

BAUER CONNECT® is an app and internet-based IoT solution which allows BAUER customers to remotely monitor - and control - the performance of the entire BAUER system through any wireless mobile device or computer; anytime, anywhere.

Key Features: allow customers to increase efficiency and productivity, save time, do more with fewer resources, enjoy lower operational costs, and have total flexibility with a solution tailored specifically for the end-user.

BAUER CONNECT® - Connection that matters.

The BAUER Connect® Mobile App will send push notifications if certain critical parameters of the BAUER system fall outside of normal operating range or if triggered by a system alert. This assures that essential personnel is notified immediately, thus allowing for pro-active intervention in a situation that could potentially be detrimental to the BAUER system as well as the customer’s operation.
LIFECYCLE PERFORMANCE
BAUER is committed to the lifecycle performance of its customers

PARTS

OEM PARTS WARRANTY
RAPID DELIVERY

QUALITY AND RELIABILITY
Our factory-original replacement parts assure you that when maintenance or repair is performed, you are restoring the unit to its original specifications and performance.

PARTS: COMPATIBILITY
We configure our designs with interchangeability and our end user in mind. You can count on parts being available for all BAUER models.

PartsSales@BauerComp.com or 1-(844)-500-5822

TRAINING

ON-SITE/OFF-SITE TRAINING
FACTORY TRAINED TECHS

BAUER COMPRESSORS INC. offers a variety of on-site and off-site Training Schools. Our on-site classes are held at our BAUER Training Facility and are taught by the same people who help manufacture, test, and service our products. From electrical systems to hands-on breakdowns, we cover all areas of compressor operation.

TRAINING TOPICS
Basic mechanical theory and control system theory (electric and pneumatic), along with troubleshooting for all BAUER systems.

Class schedule and course registration at:
www.BauerCustomerTraining.com

GLOBAL SERVICE

GLOBAL SERVICE REACH
FACTORY TRAINED TECHS

FROM THE SOURCE
BAUER COMPRESSORS INC., is certified with ISO 9001:2015 quality processes providing you with confidence that cannot be duplicated by sub-standard after-market parts and service.

SERVICE AND SUPPORT
Our compressors are designed with you in mind. Easy-to-use manuals guide you through clear, mechanically-accessible repairs. Our worldwide distribution network was developed to assist in after-sales support, along with product and maintenance parts assistance.

TRAINING TOPICS
Basic mechanical theory and control system theory (electric and pneumatic), along with troubleshooting for all BAUER systems.

Class schedule and course registration at:
www.BauerCustomerTraining.com

BAUER HELPDESK

24-7 PHONE TECH SUPPORT
LIFECYCLE PERFORMANCE

TRAINING TOPICS
Total customer satisfaction is our top priority. BAUER provides 24-7 phone tech and troubleshooting support at our BAUER Helpdesk. Our support continues throughout our warranty period and beyond.
